

3 Ways Fusion Applications Help You Manage Sustainability

Sustainability has become an essential part of modern enterprise performance management, but companies continue to struggle with complete and accurate data collection, a lack of standardization for carbon accounting, and the complexities of an evolving regulatory landscape.

Overcome sustainability challenges

Complicated data management

For many companies, data collection is a manual process that attempts to capture vast amounts of data scattered across multiple spreadsheets or in disparate systems.

Inaccurate data, inaccurate reporting

Companies are under pressure from regulators and stakeholders to deliver complete and accurate reporting. Inaccurate or poor-quality data paired with generic emission factors may lead to reporting errors and give the illusion of progress.

Managing progress and delivering results

Companies can become overwhelmed by the demands of reporting and lose focus on progress. Effective data analysis and reporting tools can provide timely insights to help you develop resource-efficient value chains, decarbonize operations, and deliver measurable results.

Sustainability built-in

Simplify data management with AI

Oracle can help you improve the speed and accuracy of data management by automatically capturing and classifying data from Oracle Accounts Payable.

Control data and reduce risk

Use the AI-driven Sustainability Policy Advisor to understand reporting policies. Help address audit requirements with the Sustainability Ledger as a single source of truth. Emission factor mapping and ranking enable accurate and complete data for emission calculations.

Explore trends and share insights

Analyze sustainability activities, such as those related to water, waste, and energy. Connect with Oracle Enterprise Performance Management to build reports and develop strategic plans. Analyze trends using dashboards in Oracle Fusion Data Intelligence.

CUSTOMER SUCCESS

“We now have deeper insight into our company's overall carbon footprint, and we can use consumption data to calculate product emissions for customers.”

Stefano Mariani, Head of IT, Alcar Ruote

Help accelerate implementation with our rapid implementation package

Did you know that Oracle Fusion Cloud Sustainability is included with a Fusion ERP license? Get more out of your subscription by contacting your sales representative for a complimentary consultation.
